REPORT

📘 Digital Literacy Project Report

📄 Title Page

Name: Syed Mohammed Ameen
Registration Number: 25BHI10026
Branch: B.Tech (Your Branch)
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 31st March 2026

📌 Introduction

This project was undertaken as part of the Digital Literacy course, where I assumed the role of a Student Digital Ambassador. The objective of this project is to understand and apply essential digital skills required in academic and professional environments. The project covers multiple aspects such as creating awareness about digital literacy, building an online portfolio, exploring coding and collaboration platforms, learning professional email communication, and understanding cybercrime and its prevention. Through these tasks, I gained practical knowledge of how to communicate responsibly, maintain a professional online presence, and stay safe in the digital world. This project has helped me become more confident and aware while using digital tools and platforms.

🎨 Task 1: Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic included key topics such as the meaning of digital literacy, safe internet practices, and professional online presence. I designed the layout using simple visuals, icons, and short text to make it easy to understand for students.

The infographic highlights how digital literacy is not just about using technology but also about using it responsibly and effectively. It also explains the importance of protecting personal data and maintaining a positive online identity.

One challenge I faced was organizing the content in a visually appealing way without overcrowding the design. However, I learned how to balance text and visuals effectively. This task helped me understand how to present information clearly and creatively.

💼 Task 2: Digital Portfolio

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and (optionally Kaggle/others). These platforms are important for building a professional digital presence.

GitHub is used to showcase coding projects and technical work. LinkedIn is used for networking and presenting academic and professional details. These platforms help students connect with recruiters and internship opportunities.

I created a GitHub profile README with my basic details and future goals. On LinkedIn, I updated my education details and profile information. Over the next four years, I plan to regularly update these platforms with my projects, skills, and achievements.

This task helped me understand the importance of maintaining a professional online identity and preparing for future career opportunities.

💻 Task 3: Coding & Collaboration Platforms

For this task, I explored coding and collaboration platforms. I created an account on a coding platform like HackerRank and completed a beginner-level problem. This helped me understand how coding platforms work and how they can improve problem-solving skills.

I also created a Google Form as a Digital Literacy Awareness Quiz with five questions. The form included both multiple-choice and short-answer questions. This form can be used to test students' understanding of digital literacy concepts.

These tools are very useful for academic purposes. Coding platforms help in improving programming skills, while Google Forms help in conducting surveys and quizzes easily.

This task helped me gain practical experience in using online tools for learning and collaboration.

✉️ Task 4: Email Etiquette

One example of poor digital communication is when a student sends an unclear or informal email to a professor. For instance, writing a message without a subject line or proper explanation can lead to confusion or being ignored.

This issue can be avoided by following proper email etiquette. A professional email should include a clear subject, respectful greeting, structured content, and proper

closing. Providing complete information helps the receiver understand the request easily.

This task taught me the importance of professional communication and how proper email writing can create a positive impression.

🔐 Task 5: Cybercrime Reflection

While researching cybercrime, I was surprised to learn that many attacks such as phishing and UPI fraud rely on simple tricks rather than advanced technology. Attackers often use fear and urgency to manipulate users.

This made me realize that awareness is the most important factor in preventing cybercrime. Even educated users can fall victim if they are not careful.

One habit I will change is being more cautious before clicking on links or making online payments. I will always verify sources and double-check details before taking any action. This will help me stay safe online.

📌 Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to communicate professionally, use online platforms effectively, and protect myself from cyber threats. Each task provided practical knowledge that can be applied in real-life situations. Overall, this project improved my confidence in using digital tools responsibly and prepared me for academic and professional challenges.
